Abbreviations and glossary

Agri.	Agriculture (ISIC 4 section A)
Bal.	Trade balance
BLA	Blanchard (2005)
BLS	Bureau of Labour Statistics (BLS, 2014)
C&C	Carmeci & Chies (2006)
Calc.	Own calculation
CS	Commercial services
DEN	Denman (1996)
DEST	Statistisches Bundesamt (German Statistical Office), Destatis (2015)
Empl.	Number of employed persons
EU-K	EU KLEMS database (EU KLEMS, 2012)
EU-ST	Eurostat database (Eurostat, 2014), unemployment data since 1983
Ex	Exports
Fuel	Fuel (SITC section 3)
GDP	Gross domestic product
GVA	Gross value added
H Inc.	High-income countries (according to World Bank classification)
HT-M	High-technology manufacturing (ISIC 4 sections 20-21, 26-30) (For trade, World Bank data basing on the UN Comtrade database was used)
Im	Imports
Ind.	Industry (ISIC 4 section B-F)
JAP	Statistics Bureau of Japan (2015)
KIBS	Knowledge-intensive business services (ISIC 4 sections J-K, M-N)
Manu.	Manufacturing (ISIC 4 section C)
Merch.	Merchandise
mn	million
OECD	Organization for Economic Co-operation and Development (OECD, 2014a)
O & M	Ores and metal (SITC sections 27, 28, 68)
Pop.	Population (number of inhabitants)
PP	Primary products (ISIC 4 section B) (For trade, the sum of ores and metal and fuel was used as a proxy)
Serv.	Services (ISIC 4 sections G-U)
tn	trillion
Unem.	Unemployment rate (of active population)
USD	US dollar (in constant 2010 prices)
WB	World Bank (World Bank, 2014a)
Wick	Belgium: a country study (Wickman, 1985)
WKÖ	Wirtschaftskammer Österreich (Austrian Chamber of Commerce)
WTO	World Trade Organization (WTO, 2014)

Appendix 2

Economic data of emerging countries

Content

Abbreviations and glossary ii

Note on the processing of data, especially sectoral labour data ii

Latin America

Argentina	1
Brazil	2
Chile	3
Colombia	4
Ecuador	5
Mexico	6
Venezuela	7

East Europe & Central Asia

Bulgaria	8
Croatia	9
Czech Republic	10
Kazakhstan	11
Poland	12
Romania	13
Russia	14
Serbia	15
Slovak Republic	16
Turkey	17
Ukraine	18

East Asia

China	19
India	20
Indonesia	21
Korea (South)	22
Malaysia	23
Thailand	24
Vietnam	25

Abbreviations and glossary

Agri.	Agriculture (ISIC 3.1 sections A-B)
Bal.	Trade balance
Calc.	Own calculation
Empl.	Number of employed persons
Ex	Exports
Fuel	Fuel (SITC section 3)
GDP	Gross domestic product
H Inc	High-income countries (according to World Bank classification)
ILO	International Labour Organization (ILO, 2014)
Im	Imports
Ind.	Industry (ISIC 3.1 sections C-F))
KIBS	Knowledge-intensive business services (ISIC 3.1 sections 64-67, 71-74) (If not available, ISIC 3.1 sections J-K were used as a proxy.)
Manu.	Manufacturing (ISIC 3.1 section D)
Merch.	Merchandise
mn	million
O & M	Ores and metals (SITC sections 27, 28, 68)
OECD	(OECD, 2015)
Pop.	Population (number of inhabitants)
PP	Primary products (ISIC 3.1 section C) (For trade, the sum of ores and metal and fuel was used as a proxy)
Serv.	Services (ISIC 3.1 sections G-Q)
tn	trillion
Unem.	Unemployment rate (of active population)
USD	US dollar (in constant 2010 prices)
WB	World Bank (World Bank, 2014a)
WTO	World Trade Organization (WTO, 2014)

Note on the processing of data, especially sectoral labour data

The available ILO data (ILO, 2014) was in most cases not ready for direct use. Very often, data was incomplete or inconsistent. The procedure was to take the best available data as a guideline and adapt the other data accordingly. E.g. if the total workforce was available on a reliable basis (e.g. correlating World Bank and OECD data), the indicated sectoral proportions (not the absolute numbers) of ILO studies was taken and the workforce distributed accordingly. Missing data was interpolated or extrapolated by suitable curve fitting (in most cases based on linear projections).

Appendix 6

Economic success of mature countries

Measuring economic success by the economic success ratio s_{total}

As an additional input for the considerations, the economic success of countries is taken into account. For this, a quantitative model is built. Basically, the relevant factors used are those for determining the type of de-industrialization. Also there, the success of a country's economic policies is mainly attributed to national income, unemployment and trade. To combine these influences, an economic success ratio s_{total} was calculated as defined by the following formulae:

$$s_{total} = (s_1 + s_2 + s_3)/3 \text{ (%)} \quad (\text{A6-1})$$

with $s_1 = (GDP/cap._i)/(GDP/cap._max) \text{ (%)}$ (A6-2)

$$s_2 = 115 \% - 5 \cdot \text{unemployment rate} \text{ (%)} \quad (\text{A6-3})$$

$$[s_2 = 100 \% \text{ if unemployment rate} < 3 \%]$$

$$s_3 = 76 \% + 2 \cdot \text{trade balance} \text{ (%)} \quad (\text{A6-4})$$

In Figure A6.1, the results are displayed graphically in dependence of relative manufacturing employment. Since the manufacturing employment rate, with rare exemptions, has constantly fallen, the development lines are to be followed from left to right. Only the values for 1973 (light dot) and 2008 (full dot) are explicitly marked. Yet, also the 1988 and 1993 values are visible in this graph, so the success (or failure) path can be retraced.

A simplified version is given in A6.2 which is restricted to the 1973 and 2008 values, so the total change in manufacturing employment and economic success becomes clearer.

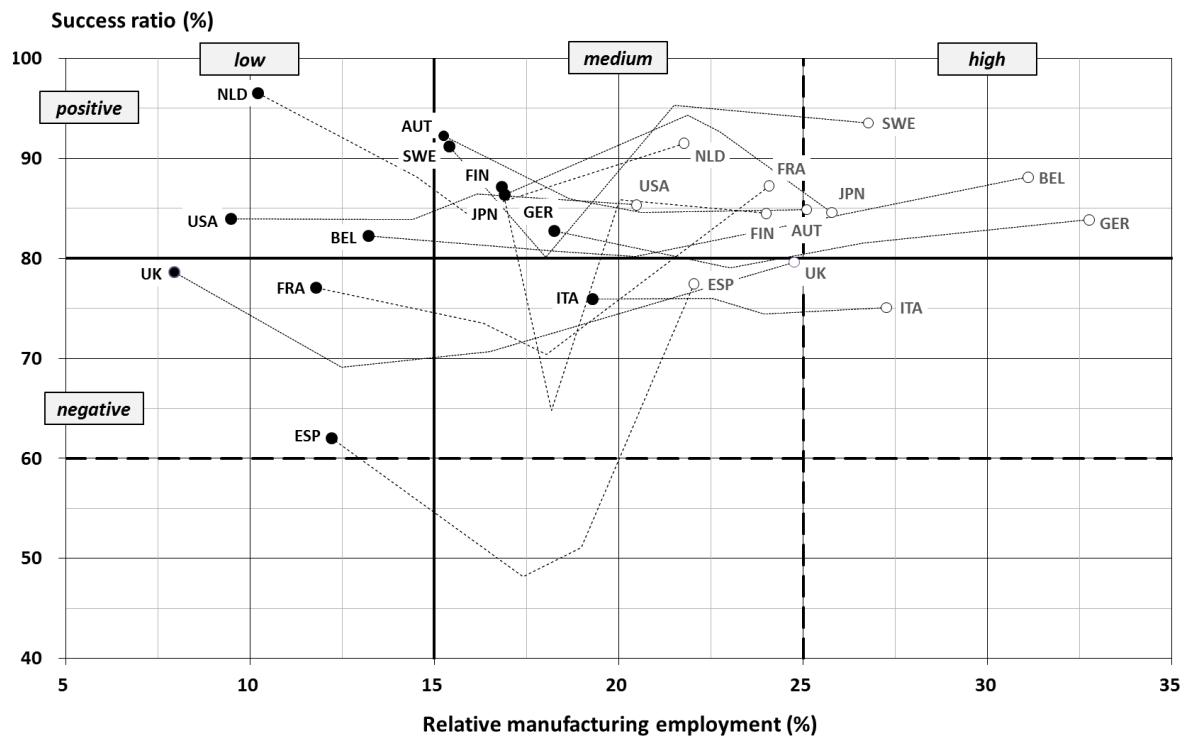

Figure A6.1 Economic success vs. relative manufacturing employment

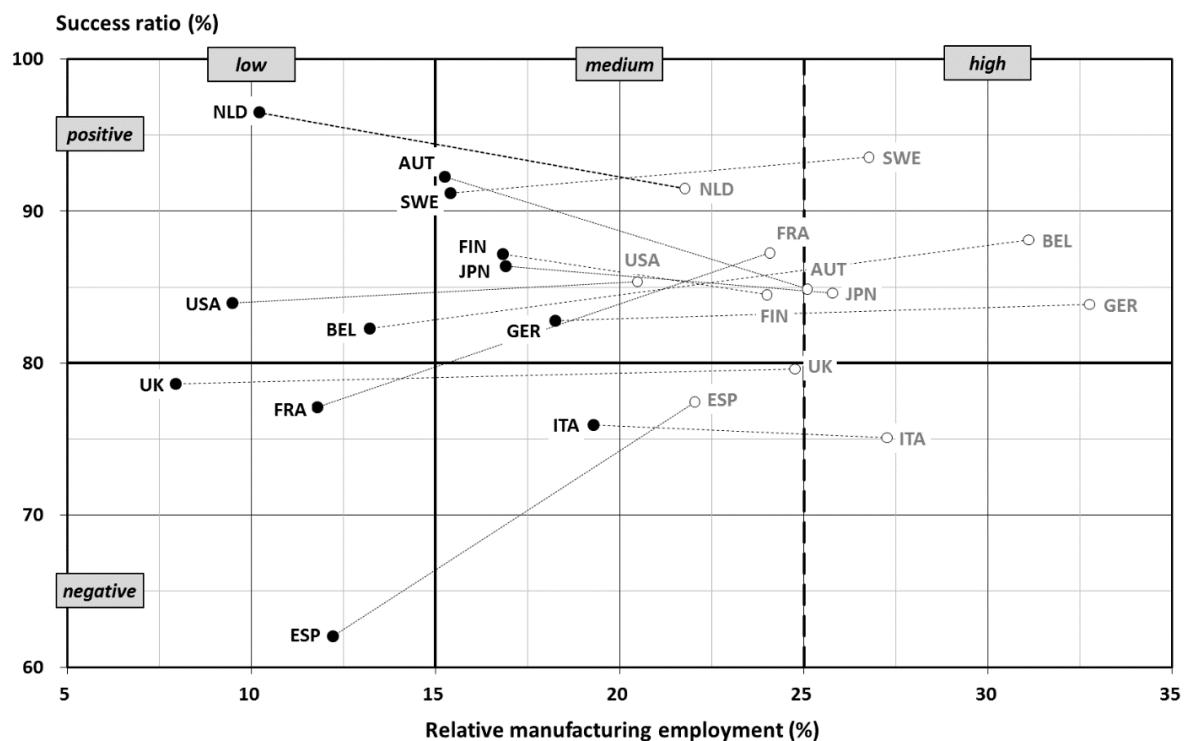

Figure A6.1 Economic success vs. relative manufacturing employment (1973, 2008)

In 1973, six states were still in the region of a high share of workforce in manufacturing, six were in the (right) medium field. 35 years later, the states have de-industrialized by an average of 11.6 %, meaning that they have moved into the field to the left. With two exceptions, this has been the case, so the relative positions of countries remained more or less unaltered. The exceptions were:

- Finland, which stayed in the midfield and de-industrialized least of all countries (-7.2 %p),
- Belgium, which moved from ‘high’ to low relative manufacturing employment at the highest absolute de-industrialization (-17.9 %p).

Concerning economic success, only one country changed its group. It was among the group of losing states:

- France moved from positive (# 4) to negative (# 10).
- The biggest loser was Spain which started in the negative region and lost more ground until 1993.
- Belgium also lost significantly and moved down from # 3 to # 9.

On the winning side, there was:

- Netherlands (# 1, former # 2),
- Austria (# 2, former # 6),
- Finland (# 4, former # 8).

All other countries are somewhat in between the outlined extremes.

Relative values

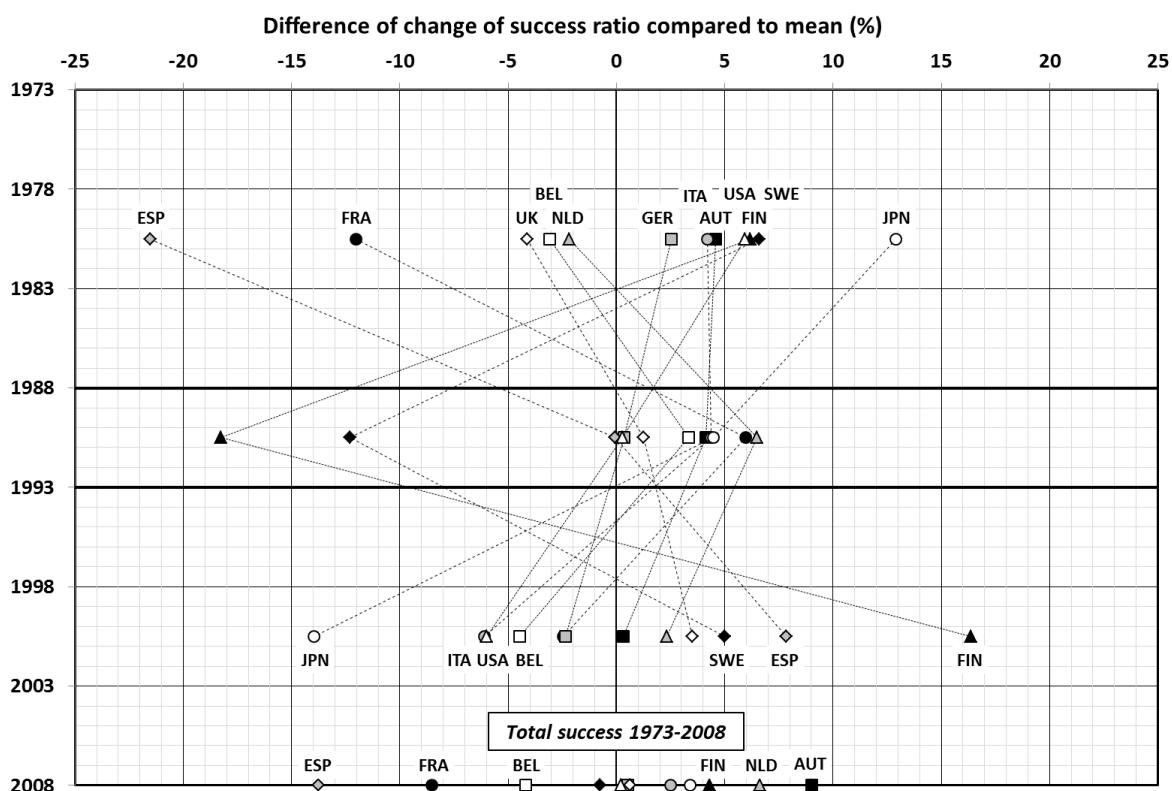

In order to deduct the influence of economic cycles, economic success was also calculated by the difference between the actual values of the economic success ratio and the respective period average (unweighted mean value of all states of the sample group) which is given in Table A6.1.

Table A6.1 Change of mean success indicators (1973-2008)

Indicator	1973-1988	1988-1993	1993-2008	1973-2008
Success in GDP/cap (% of max.)	5.0	-2.1	3.1	6.0
Success in fighting unemployment (%)	-17.9	-11.2	16.1	-13.1
Success in Trade (%)	-0.3	3.6	-1.0	2.2
Total success	-4.8	-2.8	6.0	-1.6

Sources Based on World Bank (2014a) data and own calculations, constant 2010 prices

The net success is graphically illustrated by Figure A6.3. It depends on the three factors described above by formulae.

Source: Own calculations, based on World Bank (2014a) data.

Figure A6.2 Relative economic success

Here, the following information is rendered additionally:

- In the pre-globalization phase, the states could increase their wealth. The indicator does not reflect this absolute change but only the relative success in comparison to the leader. If the mean value becomes larger, this means that the difference between the leader and other nations has become smaller at average, a negative indicator means the opposite. As a general trend, differences between western states became smaller.

- Many states were facing serious and rising unemployment. These problems worsened in the transition phase, probably due to economic decline in the course of the decay of the East Bloc states. They could only be solved, at least partly, in the prosperous globalization phase. The success rate depends largely on the unemployment rate.
- Changes in trade are not weighted as much as those in unemployment, so their potential impact on the success rate is lower.

The results of the analysis of relative values will now be briefly summarized. A corridor of +/- 4 % in success ratio will be considered as a neutral result (n). Less means comparatively losing out (l), more means winning (w). As by total success and period results in brackets (1973-88, 1988-93, 1993-2008), there are the following results, ordered by their total change in success:

- winners: Austria (w-w-n), Netherlands (n-w-w), Finland (w-l-w),
- midfield: Japan (w-w-l), Italy (w-w-l), UK (l-n-n), Germany (n-n-n), USA (w-n-l), Sweden (w-l-w)
- losers: Belgium (n-n-l), France (l-w-n), Spain (l-n-w)

These findings correlate well with the absolute levels of economic success.

Interpretation of the results

The country with least de-industrialization is among the group of most successful countries, the country with most de-industrialization (in %p) is among the losing states. This can be a mere coincidence, but also part of a general trend. To sort that out, the interrelation between manufacturing employment and economic success was investigated by means of a correlation analyses. The results are shown and discussed in the the main text, chapter 6.1.
