This paper aims to identify factors that influence the expectations of a wide range of stakeholders on the information disclosure in the Malaysian State Islamic Religious Councils (SIRC) annual reports, employing semi-structured interviews. The majority of interviewees perceived accounting standards as the main factor contributing to their expectations and further influenced the reporting practices among accountants in SIRC. Others are state fatwa (Islamic rulings), audit expectations, and individual perceptions. The result of the interviews revealed that on the top of accounting standards and government guidelines on the reporting for all government agencies, SIRC should take into account their greater accountability, which should be reflected in their reporting practices. Therefore, Islamic accountability through fatwa, audit expectations, and public demands could be considered. Such awareness is important in SIRC, to differentiate them from other government agencies. The existence of governance is similar to the board of members in a company, in SIRC through the fatwa committee. Therefore, this study suggests that the extent and quality of disclosure depends on the demand from the regulators, auditors, and funders. The findings suggest that SIRC should have an incentive to provide more information to satisfy various stakeholders' needs. Future studies can be carried out to suggest a set of disclosure items that should be disclosed in the SIRC annual reports in order to increase the level of disclosure, discharging their accountability.

Keywords: disclosure, Islamic finance, accountability, State Islamic Religious Councils

Introduction

Numerous studies have been undertaken to identify the underlying motives of corporate disclosure to discharge accountability of the reporting entity. The disclosure practice is subject to the varying target audience and purpose of the report (Ntim, Soobaroyen, & Broad, 2016). In particular, identifying the stakeholders and their relationships with reporting entities is important to identify their different interests (Connolly & Hyndman, 2004). A review of previous studies showed that various interests are based on the political, economic, or financial and social factors, institutional and governance mechanisms (Bakar & Saleh, 2011b), explaining factors that influence the disclosure practice. Specifically, this paper aims to identify factors that influence the expectations of content of reporting in the SIRC's annual reports. This paper aims to investigate factors that influence the expectations of a wide range of stakeholders on the information disclosure in the Malaysian State Islamic Religious Councils (SIRC) annual reports.

Next section reviews several motives of disclosure. The remainder of this paper is organised as follows: Section 3 discusses the research methodology. Section 4 presents the results and Section 5 summarises and concludes.

Motives of Disclosure

Five motives of disclosure are discussed, these are: political, financial, social, institutional, and governance.

Political Motives

Disclosure in the public sector is heavily based on the application of the principal-agency relationship similar to that in the private sector, which acts to reduce information asymmetry. As a result of information asymmetry in the principal-agency relationship, Sarker (2006) asserts that cases in developing countries such as corruption, abuse of authority, theft, deceive, patronage and favouritism exist in politics and public administration. Indeed, to reduce this information asymmetry, transparency in the public sector is essential. This may motivate political managers as agents to disclose information that allows the monitoring of their actions (Laswad, Fisher, & Oyelere, 2005). The information is essential for showing accountability of the politicians and honouring their promise for re-election purposes. Gandía and Archidona (2008) found that disclosure levels depend on political competition in Spanish city councils. The higher the political competition, the more likely they are to disclose. However, a study conducted by Laswad et al. (2005) on local authority in New Zealand failed to support such a consensus. This is similar to Evans and Patton (1987), a study conducted in the US. The agency theory is eventually consistent with the public accountability paradigm which explains the direct relationship between funding

and disclosure level (Bakar & Saleh, 2011a; Zaitul, Atan, & Wah, 2014). However, the result is mixed since Ingram (1984) supports the prediction, whereas others failed to provide evidence such as Bakar and Saleh (2011a) and Robbins and Austin (1986).

Financial Motives

Another contributing factor is financial motivations for economic interest. In general, government entities and NPO depend on external and self-funding. Fund-raising issue thus, is crucial to finance their operations. Higher disclosure is provided to signal that the reporting entities have managed their funds wisely, so that it might influence the contribution decision. Atan, Zainon, Nam, and Aliman (2012) examined the disclosure level of the 2010 annual report of registered religions NPO (RNPO) in Malaysia. They found that the funded RNPO reported a higher level of disclosure than the non-funded RNPO, supporting Zaiton et al. (2014). Likewise, this was proved by Arshad, Bakar, Sakri, and Omar (2013), who indicated that managers use the annual report to ensure a continuous flow of resources to their organisations. Nevertheless, Parsons (2007) revealed inconsistent results about whether donors in the US use disclosure information for decisions about donations. As a result, Heijden and Van (2013) found that the reports for small fund-raising charities are considerably better than for large fund-raising charities.

Social Motives

Social context includes trust, religion, and organisational structure which affect disclosure. Yasmin, Haniffa, and Hudaib (2014) conducted interviews with trustees and preparers of annual reports in Muslim charity organisations in the UK. They found that donors absolutely trust Muslim charities based on the “identity-based trustee” and “knowledge-based trust” and have resulted in low disclosure. This trust of donors appears to override the need for accounting, which is consequently neglected.

However, Jayasinghe and Soobaroyen (2009) assert that accounting may enhance the accountability mechanism in line with the religious spirit Abdul-Rahman (1998). For instance, Abdul-Rahman (1998) found that religious organisations are prominent in accounting practice for accountability discharge. Not only religion but also other social contexts such as modernity status and location of regions, exert their influence. States with higher economic activities have better disclosure in comparison with rural and traditional regions.

Samkin and Schneider (2010) examined the importance of the annual report, in a different social context within the legitimacy paradigm. They performed a longitudinal single case study of the Department of Conservation (DOC) in New Zealand. They reviewed a Statement of Service

Performance in the printed media from its establishment in 1987 to 30 June 2006 through the annual report. It was revealed that the annual report could play an important legitimising role. However, the extent of disclosure in the annual report was ignored.

Despite the importance of the annual report, disclosure that meets the needs of stakeholders is crucial. Zainon, Atan, Wah, and Nam (2011) examined institutional donor expectations and the information that charity management offers to understand the expectation of stakeholders. They performed telephone interviews followed by email. It was found that financial and non-financial information is perceived as important by the institutional donors but is not the charity's major concern. They have identified expectation gaps between the donors and the charity.

Institutional Motives

Institutional motivations consist of three factors: namely size, accessibility, and staffing profile, which might explain such disclosure practice. Firstly, the size of the reporting entity may explain the extent of disclosure as suggested in the agency theory. Large firms have a higher agency theory encouraging management to disclose more information to mitigate agency conflict. Further arguments are the economies of scale in relation to the cost of gathering, collecting, and reporting (Laswad et al., 2005), complexity, and a high number of activities which may expect greater disclosure. Zainon et al. (2011) found that the size is highly significant and positively associated to the extent of disclosure of charities. Such notion also has been proven in Christensen and Mohr (2003) study on museums in the US.

Secondly, accessibility is another factor that influences disclosure. With today's rapid ICT development, e-government is very well-established and the most effective channel of information for the annual report is on website. This offers attractive multimedia features acceptable by the public (Fisher, 2004). There is less cost, wider readership, and faster accessibility than traditional publication (Debreceeny, Gray, & Rahman, 2002). Ashbaugh, Johnstone, and Warfield (1999) examined the usefulness of financial reporting on the website, complementary to the printed annual report. They found that internet reporting is the best communication channel because of its dynamic and unique features using web browser and hyperlinks. This implies that the easier public access to the annual report, the disclosure level in the annual report would be higher. Indeed, the internet may work in justifying the increasing use of reports by government.

Thirdly, staffing profile on the number of staff and their qualifications may explain the extent of disclosure. Nasir, Othman, Said, and Ghani (2009) interviewed representatives of charity organisations in Malaysia to investigate the problems faced in preparing financial reports. It was discovered that although all charity organisations submitted their balance sheets to the Registrar

of Society (ROS), the degree of reporting practice is varied. Only 60% of them presented a cash flow statement and 59% had their financial reports audited by external auditors. This was due to the lack of skilled accounting staff and high staff turnover, which calls for the need to employ experienced accountants. This is supported by Heijden and Van (2013); they found that accessibility to qualified accountants in large Dutch registered charities is more likely to result in higher quality of reporting than smaller charities. Smaller charities tend to suffer from misreporting and misclassifying due to less monitoring and the sophistication of accounting tasks.

Governance Motives

There are two forms of governance: external and internal, which encourage accountability and transparency. External governance includes accounting rules, requirements of reporting, and the government regulations to encourage compliance. Internal governance refers to corporate governance mechanisms such as attributes of board of directors and audit committees in terms of size and composition. These are discussed next in some details.

External governance emphasises regulations, which have been acknowledged in many studies. The absence of accounting guidelines and ineffective enforcement may influence disclosure (Masruki, Hussainey, & Aly, 2018; Dhanani & Connolly, 2012; Zainon et al., 2011). The governance may gain trust of stakeholders, and this can be best reflected in the reporting while effective regulation is eventually articulated for legitimation.

This is to demonstrate the accountability of reporting entities.

Daniels, Braswell, and Beeler (2010) examined the accounting and financial reporting of orphanage in America. It was found that the orphanage recorded the reporting of expenditure and source of funds. They inferred that external reporting may have been legitimising factors to overcome the liability of newness. A sense of propriety and transparency were promoted among the stakeholders, especially contributors. Yet, the study suggests that the effectiveness of regulation is still a significant issue in assuring compliance. This view is consistent with a study in Italy which was conducted by Masruki et al. (2018), Zainon Hashim, Yahaya, and Atan (2013), and Mussari and Monfardini (2010), who revealed that regulation is essential as a mechanism to regulate social disclosure practice, respectively in Malaysia and Italy. The disclosure practice demonstrates a process of convergence towards a partially regulated framework, which requires standards and guidelines. Consequently, it is suggested that reporting standards for the NPO require improvement to increase usefulness (Abdul-Rahman, 1998; Dhanani & Connolly, 2012), to allow accurate judgement on donation decision-making (Ntim et al., 2016).

Pertaining to internal governance, previous studies have shown board size, composition, and performance can explain the extent of disclosure. Goddard (2005) analysed the association between governance, accountability, and accounting in the UK local government. The study concluded that there is a relative importance of accountability over governance. The governance aspects had been neglected because the organisations merely focused on conformance. Thus, this indicates the needs of improving corporate governance mechanisms such as board size, composition, and audit committee attributes in non-profit based organisations.

Methodology

Semi-structured interviews were conducted, augmenting the findings and to address the basis of the disclosure practices. Specifically this study investigated the factors that influence the expectations of information disclosure in SIRC annual reports. In this study, the interviews are conducted in Malay (official language in the Malaysian public sector) via Skype. The Skype interviewing is a useful replacement for traditional face-to-face interviews to gain access to interviewees (Deakin & Wakefield, 2014). The majority interviews lasted between 30-45 minutes to a maximum of 60 minutes. The conversations were recorded with the consent of interviewees. This study shows various different perspectives of interviewees in order to gain insights into the SIRC annual reports, thereby representing each stakeholder group. These are preparers (10 accountants of SIRC), regulators (2), auditors (3 National Auditors), and users ¹ (2 fund contributors/academics), asking the preparers and non-preparers: What are the factors that influence the content of reporting in the SIRC's annual reports?

Results

This section discusses the responses from interviews on what the preparers (AC), auditors (AU), regulators (R), and the public (C) perceived about information disclosure in the SIRC annual reports. This will identify factors that influence the expectations of stakeholders on the disclosure in SIRC annual reports. The findings are discussed according to four themes namely, National Accounting Standards, state fatwa (rulings), audit expectations, and individual perspectives that were identified in the interview analysis.

¹ The contributors/academics (professor in Public Sector and Islamic Accounting coded as C1 and C2), representing the public are considered those who are interested in the SIRC annual reports as funders and knowledgeable.

National Accounting Standards

In Malaysia, the Malaysian Public Sector Accounting Standard (MPSAS) applies to all public sector entities in Malaysia other than government business enterprises (Accountant General's Department, 2013). When accountants in SIRC were asked about the basis of preparing financial statements, the majority of the answers were "accounting standard". This deals with the most basic accountability level for compliance with the accounting standards (Dunne, 2013). One accountant in the North 2 stated: "Accounting standards are the main guidelines in preparing financial statements" (AC4). Another accountant in East Coast 1 commented: "We follow MFRS" (AC12), while one accountant in East Coast 2 added: "We follow the accounting standards in PERS (private entity reporting standards)" (AC11). Further explanation on PERS, was mentioned by an accountant in the Central 2: "We follow accounting standards issued by Malaysian Accounting Standard Board (MASB), specifically PERS because we are a small entity and have no subsidiary" (AC2).

The importance of accounting standards compliance has been highlighted by a National Auditor who stated: "All disclosure items should be disclosed in the annual report of SIRC if they are affected in the financial statements, it should be explained in the notes to the accounts and none of them could be escaped" (AU1). However, due to the uniqueness of SIRC, the accounting standard is not the only consideration in preparing financial statements. A National Auditor pointed out: "Despite the accounting standards, SIRC is also subject to the provisions of state enactment" (AU3). This is because of the existence of monitoring a *Shariah* committee in every SIRC to ensure *Shariah* compliance.

One accountant in the South posited: "In terms of reporting, we follow the accounting standards, at the same time considering fatwa which even takes precedence over the standards" (AC9). An accountant in the North supported this by saying: "The accounting standard is one of our guidelines in preparing annual reports and then we take into account any decision being made by fatwa in our council. As our main focus is on zakat, so our main reference is *Shariah* compliance which takes precedence over the accounting standards. This matter also has been acknowledged by the National Audit Department" (AC4).

This practice was relevant as a national accountant policy maker state: "Although financial statements are audited based on the accounting standards, some activities in SIRC such as zakat, waqaf and mal are not covered in the accounting standards" (R1). The auditor mentioned: "The SIRC annual report that I audited used best reporting practice in preparing its financial statement. However, if there is a lack of guidelines, the SIRC has to refer to its fatwa committee and it should be accepted by the auditors" (AU1). Another view of one researcher highlighted the lack of accounting standards. "In terms of references that they should refer to, if I'm not mistaken there

might be no specific accounting standard in particular in preparing the annual report that SIRC have to follow" (C2).

Due to the complexity of the reporting for SIRC, an accountant in the North said: "We have to fulfil several constituents; these are fatwa, board members and MASB. But in terms of accounting standards, MASB is undergoing research about zakat accounting and they requested data from us for that research purpose" (AC4). As a result, SIRC has a wide accountability chain which has led to different types of accountability aspects, as one researcher claimed: "On the one hand, we have financial accountability and on the other hand we have religious accountability, so there are two aspects of accountability here. It is not just purely administrative and financial; it is also about Islamic accountability" (C1). Another researcher also agreed: "Besides the financial accountability, SIRC also need to think of accountability in terms of their management and political accountability" (C2).

In short, three types of accountability that SIRC need to take into account in preparing annual reports are: financial, political, and managerial (Laswad et al., 2005; Heijden & Van, 2013; Abdul-Rahman, 1998). The various types of accountability have led to different interests such as economic, political, legal, and social accountability. These factors could influence the reporting content of SIRC in order to satisfy the needs of various stakeholders with different interests. Despite the various challenges in fulfilling several types of accountability to address many constituents, a number of suggestions were highlighted. One researcher recommended: "SIRC are state statutory bodies so, what they can do is to refer to federal statutory bodies requirements because the federal statutory bodies reporting requirements are quite regulated" (C2).

The reporting guideline for preparing the annual report here refers to the Malaysian Government Treasury Circular (MGTC) 4/2007 which was issued by the Ministry of Finance, Malaysia. However, there is a limitation of such a reference, as further explained by the researcher: "Referring to MGTC 4/2007, it is just part of what they should do. SIRC have a different system than the federal statutory bodies but at least they have some references to the established reporting system" (C2). As the circular applies to all statutory bodies in general, not all disclosure items recommended are applicable to SIRC. However, they can take part of the circular and enhance it, based on their own positions and public expectations.

Another key point to highlight from this suggestion is the development of a reporting system. The researcher (C2) posited it should be done collectively, which means that all SIRC representatives sit together. Accountants can consider and deliberate on what the best reporting system should be. Finally, a set of recommendations can be made for the best reporting practices for SIRC, as pointed out by another researcher: "If you follow the development of government financial reporting in Malaysia, it is a basic administrative accountability; they have yet to move

to wider stakeholder accountability towards the public. In general, government financial reporting in Malaysia is very fundamental not really reaching the level of what we have seen in the UK, Australia or in the US" (C1).

All government entities in Malaysia are audited by the National Audit Department (NAD). SIRC may also be influenced by government financial statement requirements. In this case, however, the need for zakat reporting is crucial in SIRC so as to satisfy the needs of stakeholders within public accountability. This is suggested by C1 which supports the present study. As such, the present study is pertinent and supported by several interviewees among accountants in SIRC, regulators, and researchers.

Apart from developing a reporting system specifically for SIRC, benchmarking might be helpful in the process. The question here is to whom SIRC should benchmark their reporting. Different points of view were obtained from SIRC accountants, researchers, and regulators on current reporting practices: "We refer to the corporate annual report, we look at the nature of the information disclosure being disclosed such as structure of organisations, mission and vision but it should be revised based on the SIRC context such as zakat and other funds" (AC3). "SIRC could benchmark their reporting system with similar organisations such as local government. Although SIRC are state statutory bodies, what they can do is to refer to the reporting of federal government, and SIRC could follow any appropriate provision of the reporting since the federal statutory bodies are more regulated in reporting" (C2). This has been supported by regulators: "If we look at the annual report of the federal SIRC, it is more comprehensive" (R3). "...their report is more detailed compared to other SIRC. Probably, it is because they have a huge amount of zakat collection that needs to be reported" (R1).

The high level of voluntary disclosure in SIRC as the zakat collection increases. Meanwhile, accounting standards are believed to be the prime basis for preparing annual reports (Dhanani & Connolly, 2012) for SIRC, specifically financial statements as required by the Malaysian National Audit Department (NAD). However, due to the uniqueness of SIRC as not only a government entity, but established within the Islamic setting, they have to have their own reporting system. Developing the best reporting practices for SIRC is believed to resolve such conflict through benchmarking. It could be done with federal statutory bodies and local governments or even other corporate entities, which are more regulated in their reporting systems. In fact, the NAD also acknowledged the uniqueness of SIRC in reporting requirements. *Shariah* has to be followed via a fatwa committee in each SIRC board respectively.

State Fatwa (Islamic Rulings)

Since SIRC were established within the Islamic setting, *Shariah* has to be followed in conducting administration of Muslim wealth. This was agreed by the majority of the respondents, supporting Yasmin et al. (2014) and Jayasinghe and Soobaroyen (2009). Apart from the basic administrative accountability in government, there are religious obligations in faith-based organizations (Yasmin et al., 2014). One researcher highlighted “We have financial accountability, as well as religious accountability. So, there are two aspects of accountability here. It is not purely administrative or financial; it is also about Islamic accountability” (C1).

Islamic accountability is appropriate to SIRC because they are held responsible mainly for zakat which is a religious obligation. However, a researcher claimed: “...but treatments by many religious organizations including SIRC are because they are subjected to the government reporting requirements, so they treat pure financial accountability as normal like other government institutions; providing newsletters and so on, to them is good enough” (C1). In essence, the understanding of Islamic accountability suggests the need for annual reports beyond just the mandatory financial statement. Another researcher also pointed out: “...If they don’t disclose information, people may have some bad perceptions...things are not difficult to be reported but have high merit to the public Muslims” (C2). This infers the needs of a comprehensive annual report to avoid negative perceptions among stakeholders in discharging SIRC accountability.

As for SIRC, they have a fatwa committee which is led by the Mufti of the state. One accountant defined fatwa: “...mufti is one of the board members, and regarding any inquiries raised in the board meeting, the mufti will make the decision and this matter will be put forward to the Department of Fatwa in the state. If there is a financial implication, it will be disclosed in the financial statement” (AC6). One regulator explained: “Usually, in the case of financial statements, the fatwa council is not directly involved. However, if it is about zakat and waqaf related matters, fatwa decisions are referred to as provided in the state enactment” (R1). An accountant in the North also agreed the important roles of fatwa: “The role of fatwa is important and we even prioritise any decision made by our state fatwa” (AC7). Indeed, *Shariah* has been acknowledged by the regulators and accountants as the prime concern in SIRC reporting. Therefore, although accounting standards should be complied with, and any conflicts between accounting standards and fatwa should arise, the latter should take precedence.

Audit Expectations

Auditing for SIRC is an annual routine task which is carried out by the State National Audit Department (NAD) similar to that at federal level. The audit is performed to examine the financial

statements of SIRC, whether it is presented in a true and fair view as provided in the Audit Act 1957. One National Auditor highlighted: “A main duty of an auditor is to validate the financial statement including receivable and payable accounts. They are audited against the approved budget and accounting standards” (AUD3). She added that only the financial statement is audited. However, usually information other than that provided in the financial statement is requested, such as activity reports for the audit purpose. Such financial statement concerns on the notes to the accounts, which explain details of the presented accounts such as the operations and activities. Yet, it is not as comprehensive as the annual report.

This indicates that the preparation of annual reports is encouraged, to explain the collection and spending of funds of the year (Connolly & Hyndman, 2004). Further explanation about the post-audit work was elaborated by another auditor: “In practice, after the audit certificate has been issued by the National Audit Department (NAD), it will be presented in the State Assembly, subject to the provision in the State enactment. The state government ought to prepare documentation to the State Secretary of Government including an annual report, if there is enforcement to present it like the Federal Territory. We will only audit the annual report, if it is provided in the state enactment. Other documents such as the minutes of meetings and the accountability index also are used in auditing” (AU2). The pre-determined audit checklist of the financial statement is identified based on the accounting standards, audit requirements, and other related documents for compliance. However, a comprehensive annual report is also suggested to better explain the SIRC activities. All of them are subject to the state enactment and fatwa in the respective SIRC. Consequently, this might influence the SIRC reporting practices regarding accountability for legality and probity, as proven in studies conducted respectively by Masruki et al. (2018) on similar SIRC and Zainun et al. (2013) and Zaiton et al. (2014) on other NPO.

Individual Perceptions

Perception is another factor that influences the expectations of information disclosure and the current reporting practices, including issues in relation to the accountability relationship between the stakeholders and SIRC, the attitude of the public and top management, are elaborated here. This study views the entire stakeholder groups comprehensively within the purview of public accountability.

The meaning of SIRC stakeholders was defined by a researcher to identify the accountability relationship and information disclosure issue in relation to SIRC: “To me, whatever information that they should disclose or decide to disclose, should be based on a few things. One of them is what is their accountability to stakeholders? Stakeholders mean the Muslim public. So, they have to identify what the needs of the Muslim public are in terms of information they would like, about

the organization, their accountability and transparency” (C2). Two key findings from the above quotations are: The Muslim public are the stakeholders of SIRC, and their needs are crucial to identify to what extent information of the SIRC is held accountable to the stakeholders. In order to disseminate the information to the stakeholders, those responses suggest an annual report is needed to mitigate conflict in the agency and stakeholder theories. The importance of an annual report was claimed by another researcher: “I strongly agree that an annual report is prepared by SIRC for the simple reason that the demand for accountability by stakeholders is actually a very direct relationship, because they are zakat payers. I think the contribution to SIRC in the financial contribution makes the bulletin and newsletters insufficient to many educated and enlightened zakat payers nowadays” (C1).

Another accountability chain which emerges is between the SIRC and its state government. Contribution from the state government was mentioned by an accountant in East Coast 1 (AC12). Apart from the zakat collection, being a recipient of a grant from government, SIRC are also accountable to the government. They should consider government expectation in identifying items of disclosure beyond the compliance of a financial statement. An annual report is suggested in addition to the financial statements as claimed by a researcher: “...because of the simple accountability relationship between SIRC and the contributors, so far, the only mechanism to SIRC to be seen as accountable is through the publication of newsletters, brochures and so on. However, the contributors now are more educated, they are more sophisticated. Many times we heard about the dissatisfaction especially in the zakat payers” (C1). The reasons for dissatisfaction were highlighted: “...for example the way SIRC distribute zakat because they want to know more about the distribution, they want to know more about the financial management of zakat institution so... yet it’s not actually well met by SIRC in Malaysia so far” (C1).

This shows that the fund contributors are demanding to know the break down figures and explanations about the distribution funds, indicating that SIRC are accountable to the funders. Otherwise, this forces them to make inquiries, complaints and voice their dissatisfactions about SIRC (Wahid, Ahmad, & Kader, 2009). The routine circulation of bulletins and newsletters nowadays is not sufficient for those who are more aware of the roles of SIRC and their accountability. In this scenario, one accountant (AC7) in North 3 highlighted that fund contributors do not know the details about fund collection and distribution for the current year. Thus, she suggested that a performance measurement should be included in today’s annual report to explain to those curious members of the public. Another suggestion in a purview of public accountability was elaborated: “The element of public accountability is where we have to identify our potential stakeholders. Now, we have to start with the needs of the stakeholders and then,

we have to move backward. What are the needs of the stakeholders?" (C1). Indeed, this study aims to discover the information needs of stakeholders.

An accountant in SIRC (AC3) mentioned that a board council of SIRC consists of state government Islamic scholars (mufti) and is responsible for any Islamic matters raised in the SIRC as provided in the state enactment. Therefore, this study suggests that a wide range of stakeholders have different interest on the information disclosure from SIRC, supporting the interest in political, financial, and social.

Conclusion

This study involved interviews with SIRC accountants, policy makers, and users, such as auditors and the public, in response to the research objective i.e. to answer: What are the factors affecting the expectations and current practices of disclosure in the SIRC's annual reports? Most respondents agreed that the main basis for disclosure in SIRC was accounting standards, decisions of state fatwa and expectations of both audit and individual perceptions. Based on these findings, several factors could not be explained in the previous quantitative studies but were highlighted in the interviews. Therefore, the present interview findings complemented the quantitative results in previous disclosure studies. Future studies might consider including corporate governance practice, as board of directors is responsible to manage the disclosure of information.
